Article Body

Environment

Enterprise Developer/Server

Situation

JCL is running SORT in 2 ways, STEP01) SORT FIELDS=COPY and STEP02) SORT FIELDS=(1,5,CH,A)

- Each SORT uses:
- SORTIN consisting of a 2 file concatenation.
 - 1 file is an input file - example : MFI01.PERH.S2871362.IN
 - 1 file is the same name as the SORTOUT file - example : MFI01.PERH.S2871362.OUTA/B
 - SORTOUT- example : MFI01.PERH.S2871362.OUTA/B

In ES/ED:

- 1) when SORT FIELDS=(1,5,CH,A) is defined and an actual SORT is done, the sort works regardless of the concatenation sequence.
- 2) when SORT FIELDS=COPY is defined, sort works when the output file is defined as the 1st DD in the SORTIN concatenation

```
//SORTIN DD DSN=MFI01.PERH.S2871362.OUTA/B,DISP=SHR
// DD DSN=MFI01.PERH.S2871362.IN,DISP=SHR
//SORTOUT DD DSN=MFI01.PERH.S2871362.OUTA/B,DISP=SHR
```

- 3) when SORT FIELDS=COPY is defined, the sort fails when the output file is defined as the 2nd (or more) DD in the SORTIN concatenation.

```
//SORTIN DD DSN=MFI01.PERH.S2871362.IN,DISP=SHR
// DD DSN=MFI01.PERH.S2871362.OUTA/B,DISP=SHR
```

On the mainframe, this is permitted, and the SORT completes successfully in all scenarios above.

Resolution

~~This has been identified as a product issue, which has been addressed by defect OCTCR50A684134.~~
