

1. Use CHARSET(ASCII) for the SQL application. This way, it makes sure 0xFF is used and the ASCII collation databases will work ok.
2. Change the value of HIGH-VALUES to xFE. When compiled in EBCDIC, this new HIGH-VALUES will be converted to xDA in the input host variable and pass to the database.

To change the default value of HIGH-VALUES, add the compiler directive:

Also, include SPECIAL-NAME entry in the program source:

3. If an EBCDIC application is needed with ASCII collation, use 0xFFs literal in the WHERE clause instead of host variable filled with HIGH-VALUES (e.g. WHERE TITLE BETWEEN :W20-TITLE-LOW and 0xFFFFFFFF)
